

AERIAL AND FLOATING LIFTS

A customized product that achieves maximum efficiency and reliability

Structurally strong and durable, MAADI Group designs and oversees manufacturing of standard and custom aluminum lift devices and people/material lifting equipment. We provide industrial factories and plants with rugged mud buckets, spreader bars, lifting beams, material baskets, personnel platforms, and lifters. Our engineering team adapts each design to your specific needs and requirements, producing extremely tough lifts made to withstand the rigors of daily use. MAADI engineers incorporate your input and the latest technology advances into a customized product that achieves maximum efficiency and reliability to meet the needs of an ever-changing workplace – whether you are moving people, equipment or materials.

Each MAADI Group aerial lift is manufactured to the most stringent structural and safety standards, yielding the highest quality, cost-effective lift product that delivers exceptional value to your work site for years to come. Every aspect of your lift, including the work platform, basket and attachment parts are designed and fully certified in writing by our professional engineers with a conformance certificate for each product. Fabrication conforms to ANSI/AWS D1.2/D1.2M:2003 standards and we are in full compliance with the Structural Welding Code for Aluminum (equivalent to CSA W47.2-M1987 Certification of Companies for Aluminum Fusion Welding), with all weldments performed by certified welders.
